

1. Jerry Jones was indicted by the grand jury on September 16, 2004.
2. Jerry Jones is on trial for his life. The State, through the District Attorney, has announced its intention to kill Jerry Jones, a human being, by lethal injection.
3. The United States Supreme Court has repeatedly emphasized that because of the exceptional and irrevocable nature of the death penalty, "extraordinary measures" are required by the Eighth and Fourteenth Amendments to ensure the reliability of decisions regarding both guilt and punishment in a capital trial. Eddings v. Oklahoma, 455 U.S. 104, 118 (1982) (O'Connor, J., concurring). See also Beck v. Alabama, 447 U.S. 625, 637-38 (1980); Lockett v. Ohio, 438 U.S. 586, 604 (1978); Gardner v. Florida, 430 U.S. 349, 357-58 (1977); and Woodson v. North Carolina, 428 U.S. 280, 305 (1976).
4. Caller ID boxes are notoriously unreliable, and are easily distorted by tampering. See Yontef, Michele. "Caller ID Myths, Spoofs, and Secrets," *PI Magazine* September/October 2001, pp. 38-40. (Attached as Appendix A.). There are also numerous commercial websites which allow an individual to falsely convey the identity of the caller. Examples of these services are attached as Appendix B.
5. Information provided on the screen of a Caller ID device relies upon computerized input from a database which contains information that was input by an individual. There is always a possibility of human error in the data-entry of the original information into the computer database that generates the caller ID information. Accordingly, the data-entry operator is an out-of-court asserter making a statement that the data input into the computer database is correct. Moreover, the caller who merely dials a number is also an out-of-court asserter making a statement by his conduct that "this is the number I'm calling." That assertion, then, is transmitted from the initiating phone to the computer database, and from the database to the caller ID device

attached to the receiving phone. In either instance, the evidence is inadmissible hearsay. Admitting this kind of evidence would violate Mr. Jones's confrontation rights. See Miller v. State, 266 Ga. 850, 856 (Ga., 1996) (use of the certified copy of the crime lab drug analysis in lieu of the lab technician's testimony violated defendant's right to confront the witnesses against him).

6. In addition to constituting hearsay evidence, caller ID evidence must also be subject to a preliminary showing that the specific box being relied upon is reliable. "The reliability of a caller ID device must be made on a case-by-case basis in light of the specific facts and circumstances. In other words, it would not be appropriate to find that a particular type or brand of caller ID device is always reliable." People v. Caffey, 205 Ill. 2d 52, 95 (Ill., 2001).

7. WHEREFORE, Mr. Jones respectfully requests a hearing on the admissibility of

Respectfully Submitted,

Christopher Adams, State Bar No. 002725

INVESTIGATIVE TIPS

Don't confuse the lack of details being sent in the blocked Caller ID scenario with the several platforms bundled with ANI II, that 911 and law enforcement use to see callers with. In those call situations authorities are receiving a digital service sent usually on its own T1, or ISDN PRI/BRI direct connect from the Telephone Company central office switch. Caller ID developed as a premium consumer service is a different technology than ANI, which was developed originally for Telephone Operations and billing then was shared with authorities thereby becoming a vital resource.

Caller's data

What about data SENT from the caller to a receiver's Caller ID box, could this be spoofed? Absolutely, and

here is where the professional PI can offer a great service to clients by making them aware, protecting them and by having the ability to verify a spoof is indeed possible under certain circumstances.

Professional manipulation of any 4 line key system or PBX will allow the programmer to send whatever outgoing number desired (This what the Caller ID will pick up). Parties on the receiving end just assume the programmer will place the outgoing number to show as the 'DID number' (Extension number) or the 'main' number for the business. Consider however that in June of 2001 a newly rehabilitated Kevin Mitnick (Ex Phreaker/Hacker) took live caller challenges on a Los Angeles radio show where he would call back listeners and spoof their

Caller ID boxes to any challenge made. One listener challenged for a callback to be made to look like his mom was ringing in. When Mr. Mitnick did the requested spoof in just minutes, listeners were shocked! Sorry to blow the cover but Mr. Mitnick WAS answering challenges called into a radio station, which WAS using a PBX!

Calling party data is also easy to spoof when it originates via an Internet (VOIP) call, spoofs can be perpetrated if one 'has a friend' at the switch, and spoof via automated extender lines are extremely common discussions in the Internet underground 'Phreak' culture so PIs must make their clients beware. Calling any establishment with a PBX and getting the operator to route out locally will also spoof to the receiver

We bridge the gap between technology and criminal records.

INVESTIGATIVE TIPS

that the caller is ringing from within that establishment. If a party is wanting to sneak into Caller ID anonymously and is calling locally but first dials a 1010 number (PIC Code) the call will appear as "Out Of Area" and if a voicemail is all someone wants to call, they can get the direct dial number to the Centrex and leave a message that way rather than by routing into voicemail via the subscriber with Caller ID.

Owners of Nokia Fido phones can, via literature that has been available on the net for years, easily change their NAM settings (Thereby changing the number they show calling from to anything they desire). This will only work, however, if the caller is routing out of the local network. There is also a cell phone by Telespree to be available later this year in every convenience, gas, or drug store for about \$30 that will be totally untraceable. Get ready PIs as this phone will be off the shelf ready with prepaid airtime and power supply cartridge but most shocking...it shall ALREADY be pre activated!

In the early and mid 90s there was the 'Presto Chango' unit which was used to spoof extra Caller ID ASCII tones into any receiving end Caller ID box using a Motorola M145447 chip. The first generation CIDCO caller ID boxes from the now departed US West were well known for allowing this spoof to occur, but these old caller ID boxes have been replaced by new technology since. There is also the 'Orange box' which sends spoofed digits during 'call waiting' Caller ID, but again you have to have the correct box on the receiving end and it is easy to tell by looking at your caller ID box that a second number has replaced the original, if you 'back button' your Caller ID just once...you shall see the true caller.

Error ID

Now that you see how many ways your client can be had, complete your ability to consult and answer their questions (for a set fee), by learning the hidden meanings behind the error codes your client may get on a caller ID unit. Local phone companies bill subscribers with a flat rate, thus unlike cell or long distance records, local phone service subscribers never see an itemized bill. There are domestic and harassment situations, however, where a subpoena of local billing may be in order, so before your client spends money to procure a subpoena make sure you investigate the background on the caller data to see if a subpoena could actually assist at all.

"Out of area" this is a default code meaning the Telephone Company switch cannot see the origination or even a spoofed number of the caller, the party is likely calling from an international location (Non SS7 protocol support), from certain pre-paid calling cards, certain pre-paid cell phones, and Internet call or a 'from the switch' call. A subpoena for data on this type of call will get you the date, time and length of the call but not the masked number you are seeking as the switch is not seeing it, so you should consult before the suggesting the efforts of subpoena here.

"Blocked" or "Private" this caller is dialing a *67 to block the call or has ordered 'blocking enabled' from their phone company. This caller's information if ordered via subpoena CAN be seen in full detail in most cases so calls arriving this way may be worth the effort and cost of subpoena.

"Buffer Full" this means your client needs to erase the stored numbers on their box to make room for new callers, you will only get this error on older caller ID boxes as the new ones simply erase by default to make room for new data. As you have no data with this error code it is unknown if you will be able to get the callers details via subpoena.

"No Data Sent" this means the signal was not entirely received but the proper checksum did arrive, as with "buffer full" it is unknown if a pull on this caller would reveal the data your clients seeks.

Professional PIs better assist their clients via knowledge of Telecom Investigations

Michele Yontef CMI, licensed private investigator is known to her associates as 'Ma-Bell' because of her vast telecommunications knowledge and her unique methodology and application of it to investigations. Speaking nationwide in 'TELECOM SECRETS' seminars she educates PIs, LEO and FBI in the legal methods of using the Telephone System to aid in number ID and skip trace. Recipient of several commendations for her efforts in use of Telecom Secrets for the location and return home of abducted children she is well known for encouraging newly educated seminar attendees to volunteer their arts for child rescue. To sign up for the TELECOM SECRETS 2001 workshops or obtain private education days for your personal office staff, please see Michele's site at or call at 877-665-6864

HOME ABOUT RATES

CONTACT FAQ

SpoofCom.com

How Does SpoofCom work?

Similar to a regular calling card. SpoofCom is accessed through our dedicated toll free number, where a user enters their pin number, desired Caller ID and the number they would like to call. The call is then placed instantly without the need to enter your dial back number. The process is fast, easy and can be access from anywhere from any phone in the USA Or Canada without the need to be online or at a computer.

What the advantage to SpoofCom your Caller I.D.

Caller ID spoofing gives business professionals the ability to manipulate their identity to their choosing and stay anonymous. Caller ID spoofing is also valuable in defeating popular telephone services such as "*57 Call Trace", "*69 Last Call Return", "Anonymous Call Rejection" and "Detailed Billing". Private Investigators will find Caller ID spoofing valuable for pretext calls.

Does SpoofCom keep my credit card information?

No, SpoofCom never receives your credit card information from our payment processors, keeping your information secure.

How Do I know how many Spoof Minutes I have used?

SpoofCom has a complex system. After you call our Toll free number and enter your Pin. SpoofCom will alert you on Spoof Minutes used.

Can I Enter any Caller I.D. Number I Want?

Enter in any numeric number from 0 - 10 digits long. However, certain telephone carriers are more restrictive than others when placing calls.

How it works:

By calling 877-2-HIDE-ME or 714-415-6026 you will access our phone system, when we have verified your account, an automated system will ask you if you would like use the last appearance number you used, keep the call ID appearance you are calling from, or replace it with another appearance number. If you choose to replace the number you will simply enter the desired appearance number followed by the pound sign. The system will then read back you new caller id for accuracy. Seamlessly you are then connected to a line bearing your input appearance number and you will then be prompted to enter the number you would like to call; when you finish dialing it connects you immediately.

Privacy Enabled Telephony Services

- Using Camophone's "Privacy Guard" service, you can make calls anywhere to the United States or Canada and you are in control of the Caller ID that is sent to whoever you are calling.

How It Works

Making Calls with Privacy Guard -- To make a telephone call, you fill out our simple web form with 1) Phone number of party you are calling, 2) A phone number to reach you, and 3) The Caller ID you wish to send. At the click of a button, the system will call you first, then call the party you are attempting to reach. The called party will receive the caller ID that you specified. The system will then bridge the two calls together. This method is private and untraceable.

Costs

Our service costs are less than standard telephone service! We accept payment through [Paypal](#) and credit cards.

Privacy Guard: 5 cents per minute.

Sign Up

You can sign up online immediately using Paypal or a credit card. [Click here to signup](#), and your account will be available for use immediately.

Telespoof.com offers the first domestic and international Caller ID spoofing service, allowing business professionals to remain anonymous when calling from anywhere in the world, to anywhere in the world. We like to think of it as "mobile invisibility".

Our service is for business professionals within the U.S. including, but not limited to; Private Investigators, Skip Tracers, Law Enforcement, Collection Agencies and Lawyers, giving them freedom to choose any number as the Caller ID. Telespoof allows you to be whoever you want to be.

Operating on toll free numbers within the U.S. and giving clients access from wherever they may be, means there is no need to be at a computer to use the service. Telespoof also allows clients to place international calls with spoofed Caller ID permitting the technology is available within the destination country.

Simply put, Telespoof will help you reach the person you want, safely and more cost efficiently. Stay anonymous and stay in business.

Frequently Asked Questions

How does Telespoof work?

Similar to a regular calling card. Telespoof is accessed through our dedicated toll free number, where a user enters their pin number, desired Caller ID and the number they would like to call. The call is then placed instantly without the need to enter your dial back number, which other services require. The process is fast, easy and can be access from anywhere without the need to be online or at a computer.

What are the advantages of Caller ID spoofing?

Caller ID spoofing gives business professionals the ability to manipulate their identity to their choosing and stay anonymous. Caller ID spoofing is also valuable in defeating popular telephone services such as "***57 Call Trace", "***69 Last Call Return", "Anonymous Call Rejection" and "Detailed Billing". Private Investigators will find Caller ID spoofing valuable for pretext calls.

Who may sign up for your service?

Our target market consists of, but is not limited to, businesses such as: Private Investigators, Law Enforcement, Skip Tracers, Debt Collection Agencies, Insurance Agencies, Fraud Departments and Lawyers.

Does Telespoof store my credit card information?

No, Telespoof never receives your credit card information from our payment processors, keeping your information secure.

How does your international Caller ID spoofing service work?

Telespoof is able to offer clients within the U.S. the ability to make international calls while remaining anonymous. However your desired Caller ID may only be displayed properly in certain countries where the technology permits. We have had the best luck with countries such as England and Germany. To dial international just enter: 011 + the country code + the area code and number you wish to call.

Can we send any number as the Caller ID and does it have to be 10 digits long?

You may send *any* number as the Caller ID and it does *not* have to be 10 digits long. Within the U.S. the number should be 10 digits long (NXX-XXX-XXXX) to guarantee proper delivery, but you may pass numbers of variable length such as "0", "411" or "12345". Results may vary based on location and the receiving ends telephone provider.

How much does Telespoof cost?

Only 10 cents per minute to anywhere in the U.S. and select countries, with volume discounts available. This is the lowest rate in professional, business grade, Caller ID spoofing. Due to increased demand, we now have a one-time processing/setup fee of \$20. Our complete rate chart with international pricing can be found [here](#).

How do we sign up?

To sign up please visit the [Get Started](#) page and fill out our form. We will validate your information and send you a link to complete the order.

Sign up for a new account and get \$5 off! One week only!
